

Just one of the global businesses that calls Indiana home, Infosys, an Indian digital services and consulting company, opened its flagship Technology and Innovation Hub in Indianapolis last year; the firm recently announced plans to transform a 70.5-acre site at the old Indianapolis Airport Terminal into its U.S. Education Center. Both the Technology and Innovation Hub and the U.S. Education Center will add 3,000 jobs by 2023. Our continued investment in Indiana will enhance our ability to serve businesses in the state, including Cummins and Allison Transmission," says Ravi Kumar, Infosys president. "We hope that Infosys's ongoing partnership with the state will inspire other businesses to invest and expand in Indiana as we have."

With the economy booming in Central Indiana, a hub for logistics, it only follows that FedEx has committed to the state by investing \$1.5 billion to expand its facility at Indianapolis Airport for its 30th anniversary. "The facility opened in 1988 with 300 team members. Today it's powered by nearly 4,000," says Amanda Williams, vice president and general manager, Air Group and Freight Services,

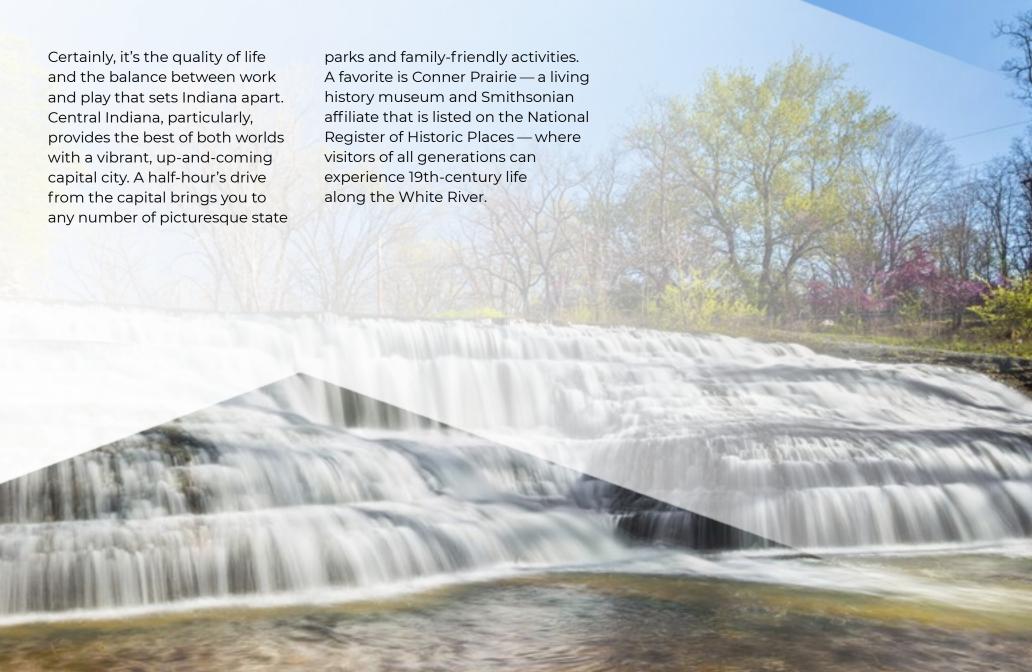

Central Region, FedEx Express. The second largest hub in its global network and, no doubt, the airport's most lucrative tenant, the expansion will increase the company's footprint by more than 50 acres and will certainly bring numerous benefits to the local economy. It also highlight's the airport's success with both cargo freight and with passengers—the airport has won

many awards, including being ranked as the best airport in North America for the sixth year in a row. It's also home to the world's largest solar farm on airport real estate. The farm's 87,488 solar panels generate more than 36.1 million kilowatt hours of solar energy annually — enough to power more than 3,650 average American homes.
